

Sea trout, 395mm (715g), taken by rod and line from River Ewe on 22nd July 2008.

The fish has been aged as a 3 year smolt age with two summers, two winters and part of third summer since going to sea. There is no clear spawning mark after either its first or second summer at sea, so the fish may have not yet spawned.

There were no sea lice on the fish.

Sweep netting supported by the Scottish Government via the Tripartite Working Group.
