

As part of his PhD project to investigate the occurrence and molecular biology of macroparasites in brown trout in Wester Ross, Middlesex University student, Toby Landeryou, found a shrew inside this trout. The trout was caught in a small burn in the hills near Gairloch on 9th July 2015.

This is the first time we have found a shrew inside a trout of this size; it represents a somewhat larger meal than the size 20 dry fly which was used by Dr Steve Kett to catch the trout! We are currently examining the shrew to confirm its identity.
